

DiSparse6: a handy way for computers to
remember digraphs

Representing digraphs

How do we represent this digraph?

Edge set: $\{(1, 1), (1, 2), (2, 4), (2, 5), (4, 2)\}$

The adjacencies/edge-set approach: *DiSparse6*

- ▶ Edge set: $\{(1, 1), (1, 2), (2, 4), (2, 5), (4, 2)\}$
- ▶ (2,4) (1,1) (1,2) (2,4) (2,5)
- ▶ (1,3) (0,0) (0,1) (1,3) (1,4)
- ▶ 1 3 0 1 1 5 0 0 1 0 1 3 0 1 1 1
- ▶ 1 011 0 001 1 101 0 000 1 000 1 011 0 001 1 001
- ▶ 101100 011101 000010 001011 000110 011111
- ▶ 44 29 02 11 06 31
- ▶ 107 92 65 74 69 94
- ▶ k \ A J E ^
- ▶ .Dk\AJE^ (9 characters)

How to convert edges to *DiSparse6*

Start with $v := 0$

Consider the next pair (a, b) in the list.

while there are still pairs left **do**

 We want $v = b$.

if $v = b$ **then**

 Print bit 0

else if $v < b$ **then**

 Print bit 1

 Increment v by 1

end if

if $v < b$ (still!) **then**

 Print b

 Set $v := b$

else if $v = b$ **then**

 Print a

 Move onto the next pair (a, b)

end if

 (When you finish the decreasing edges, print 1 n and reset $v := 0$)

end while

How long is a *DiSparse6* string?

- ▶ $\sim \frac{3}{2}e(\lceil \log_2 v \rceil + 1)$ bits
- ▶ $\sim \frac{1}{4}e(\lceil \log_2 v \rceil + 1)$ characters
